CLAIMS

1.   A content delivery method operative in a network, comprising:

configuring a third party cache into a content delivery network having a set of

edge caches located at given network locations;

5   responsive to given content requests received at the third party cache, serving

requested objects from the third party cache; and

periodically transferring a log from the third party cache to the content delivery

network identifying the objects served from the third party cache.

10   2.   The method as described in Claim **1** further including the step of parsing

the log to identify given content.

3.   The method as described in Claim **2** further including the step of having

the content delivery network bill a content provider for delivery of the given content from

15   the third party cache.

4.   The method as described in Claim **3** further including the step of sharing

revenue between the content delivery network and an owner of the third party cache.
